

Android OS Application Introduction

1. For Android 4.0 upward. Firstly it need copy IDC configuration file to the follow path: system/usr/IDC, then reboot. (Remark: It must get root administrator right before operation);
2. If the kernel is above 3.0, need select Mutitouch option and then config IDC file.
Linux kernel configuration method as follow:
 - 1)、Execute make menuconfig ;
 - 2)、Choose “Device Drivers/HID Devices/Special HID drivers/HID Multitouch panels”, Set to built-in, show “*” in front of the option.
 - 3)、Save and compile kernel.
3. IDC file name: Vendor_laad_Product_000F.IDC

Note:

Attached IDC file is text file, it can edit by notepad.

The VID and PID of different USB device can be distinguished according to the file name.
